Smart Campus Bus Tracker

TEAM MEMBERS:

- Driti Sri -2403A52236
- Supriya -2430A52230
- Sriharsha -240A52208

OBJECTIVES:

1. To show the live location of campus buses using GPS.
2. To save time for students and staff waiting at bus stops. To help the transport team handle buses better.
3. To make campus transport more safe, easy, and on time.
4. To predict when the bus will reach each stop using AI

STAKEHOLDER:

Stakeholder

Students

Drivers

Transport Department

Admin

Role / Benefit

Can see where the bus is and when it

Send their bus location to the system

Can check all buses and plan routes b

Manages bus details, stops, and routes.

PROGRAMMING LANGUAGES, TOOLS, AND SOFTWARE:

1. Frontend (User Interface): HTML, CSS, JavaScript, React, or Flutter
2. Backend (Server): Python (Flask or Django) or Node.js
3. Database (Storage): MySQL, Firebase, or MongoDB
4. AI / Machine Learning: Python with Scikit-learn, Pandas, and NumPy
5. Maps & GPS: Google Maps API or Mapbox
6. Hosting (Where the app runs): Firebase, AWS, or Render

Front-End View of Web Application:

1. Shows a campus map with buses moving in real time.
2. Displays bus details like number, route, and driver info.
3. Shows how many minutes the bus will take to reach each stop (ETA).
4. Gives alerts/notifications, for example: “Bus arriving in 3 minutes.
